Evidence, assumptions, and conclusions

A two-column reading and annotation fixture

LEFT COLUMN

A claim needs evidence and explicit assumptions. Reading carefully separates observations from the explanation offered by an author. An alternative explanation may fit the same data. Record the boundary of the claim before turning it into a general conclusion.

These lines belong to the left column only.

RIGHT COLUMN

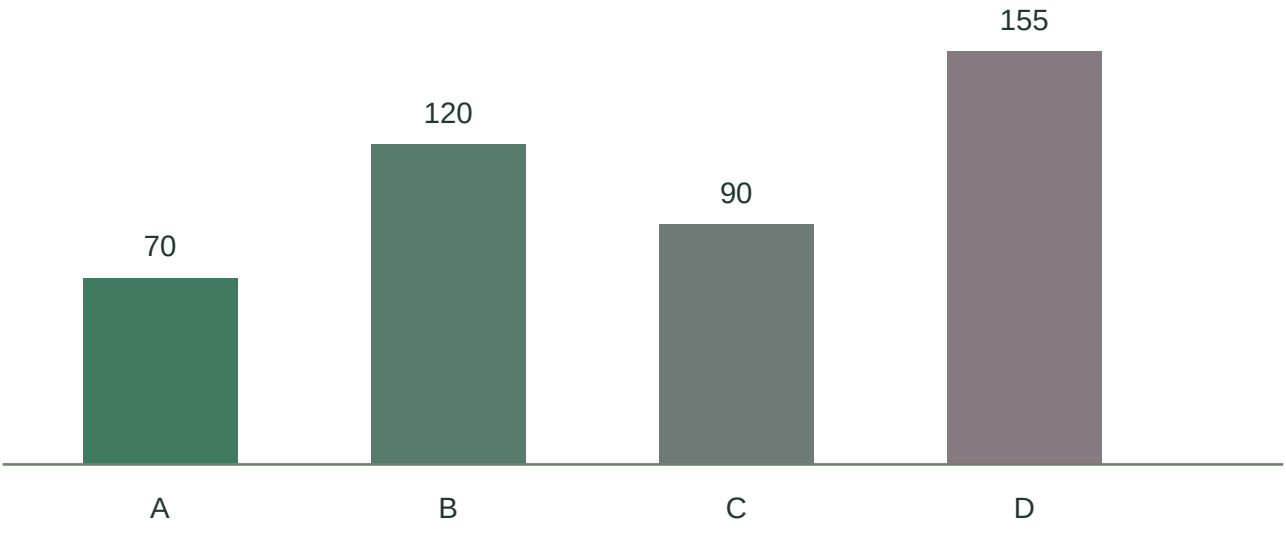
Correlation alone does not establish causation. A mechanism can explain how a result occurs. It must still be checked against the evidence. Discussion can reveal hidden assumptions. A useful note connects a question to a source.

These lines belong to the right column only.

$$E[Y \mid X] = b0 + b1\,X$$

Equation (1): an illustrative conditional-mean expression.

Figure 1. Observed values in four example groups



The chart is synthetic and exists to test faithful visual extraction.

Chinese text and a comparison table

Page two tests Unicode text selection and source navigation

这是可选择的中文原文，用来验证摘录、划线和原页定位。

知识点：先检查证据，再辨别作者的解释与自己的推断。

同一份 PDF 可以关联到多篇笔记，每篇笔记保留自己的批注。

环节	要问的问题	保留的信息
主张	作者想说明什么？	核心判断
证据	依据来自哪里？	原文与图表
边界	在什么条件下成立？	假设与限制

ROTATED PAGE: selection must remain anchored.

Zooming and rotation must preserve the original PDF location.

A region selected here must return to this page.
